TIMING IS EVERYTHING

The ebb and flow of the financial markets has always been a subject of intrigue, as the winds of change can bring both prosperity and adversity. It is a dance between the forces of the past and the potential of the future, as investors must determine whether a shift in the seemingly random, continuous gyrations of the market, signifies a trend reversal or is just a fleeting pause in the beat of a larger drum of the existing trend. This inquiry into the nature of the markets, of the patterns it weaves as it finds the truth amongst the trillions of combined calculations of all the computing and human brain power at work to figure it out, is a complex, reflexive and elusive endeavour, requiring a deep understanding of the forces that shape it. Timing, in this context, becomes a symphony of intuition and critical analysis, as it helps one harmonize with the markets and seize the opportunities they present.

Investing success depends on the ability to hear every footstep of the markets and act in concert with their movements.

There is considerable academic research with empirical evidence that the biased focus on conventional fundamental analysis helps managers generate alpha by buying at the right time, but their selling decisions underperform substantially, even relative to random selling. Put bluntly, a random set of sell decisions would do better than the average money manager. We believe this is a significantly overlooked factor in investing, and one, that we want to move beyond, by giving primary importance to the timing of our decisions. It is the essence of adaptive asset allocation – adapt and generate alpha, or underperform.

Though its conventionally considered a risky strategy, we have a different perspective – **timing and investing are inseparable activities**. Any investing act has a component of timing that irreversibly affects the value derived from the investment. In contemporary times, this observation is even backed up by the US Federal Reserve's role in the global financial system. The timing of rate decisions is paramount in determining whether policy action is constructive or destructive and even the US Fed recognizes this simple fact. By logical extension, the entire global financial system is based on the same principle which we explicitly state as a core part of our money management – 'timing is everything'.

We believe investing with a 'perpetuity' mindset leads to sub-optimal results as it leads to value traps, more detrimental effects of behavioral biases, as well as leads to a comfortable but static approach in an ever-changing world. Long-term investing is about staying invested in markets while dynamically timing the asset allocation and sector rotation. This approach may have worked during a unidirectional multi-decade trend, however, in the period of radical change that we are in now, dynamic money management has become necessary. The science of timing needs to be given focus at par with other dimensions of investing.

Time manifests itself in the world through probability distributions. There is never a fixed future, only probabilities of possible futures.

Effective money management is about investing based on how these ripples in time manifest through the dimensions of risk, liquidity and valuations. Through the Predictive Analytics set of indicators and VLRT investment framework, we have designed and implemented a money management process that is probabilistic by design.

The vision is to position better and mitigate risk of future market movements by quantifying possible future states of the global order and taking decisions that are the result of probabilistic weights.

active

absolute

unconstrained

INVESTMENT PHILOSOPHY

In a dynamic world that is continuously changing due to technology and increasingly volatile geopolitics, passive investment strategies can no longer outperform. Alpha belongs to active strategies that can invest in sync with the dynamics at play.

Being relevant comes by staying **active**

We believe consistent outperformance requires complete freedom from looking at the world relatively. It is why we design investment strategies with an absolute objective irrespective of market conditions. With this absolute objective, comes clarity of thought

Being relevant requires an **absolute** focus on returns

Embedded within our processes and systems is the conviction that the surest way to success in investing is through cultivation of a multitude of opinions and perspectives. By bringing together this diversity of ideas within our investment framework, we aim to unearth every possible opportunity in any set of circumstances

Being relevant means having an **unconstrained** perspective

fundamental is the atman,
liquidity the prana,
sentiments the maya

CORE BELIEFS

One of the oldest scriptures and philosophy in the world is the Vedic philosophy. These scriptures are a comprehensive effort to describe all aspects of the universe and human existence. To undertake this gigantic task, they rely on three core ideas - Atman, Prana and Maya. These ideas are the inspiration for our perspective on investment research and money management

FUNDAMENTAL
IS THE **atman**

‘Atman’ is the ‘true’ or ‘absolute’ self of a person, beyond all names and subjective judgements that the world and the person choose to apply on themselves. In that sense, real assets and profit-generating capacity of all economic entities and participants are the ‘fundamentals’ underlying every kind of market. **Without the Atman, an individual cannot exist. Similarly, without fundamentals, value cannot persist**

LIQUIDITY
THE **prana**

‘Prana’ refers to universal energy in all its forms. It is the vibrational force that makes every electron and atom vibrate and move. For markets, the dynamic flow of money which we study as liquidity, enables participants to undertake economic activity and create an ecosystem. **While Prana enables life, liquidity imparts a ‘value’ to assets and organisations.**

SENTIMENTS
THE **maya**

‘Maya’ depicts the illusion of this world as subjectively experienced by all humans. Each person imagines the world to be in a peculiar way, based on their own opinions and perceptions, and lives accordingly. ‘Price’ is the illusion market participants assign to every economic unit, according to their subjective ideas of the present and the future, based on a myriad assumptions, experiences and predictions. **Maya is the intricate illusion of this universe created by our minds and price is the ever-changing perception of economic value created by investors**

Pioneers of Dynamic Money Manager

INVESTMENT PRINCIPLES

MEASURABLE IS RELIABLE

Measurable is reliable: For success in investing, discipline is of more importance than any other attribute of the investment process. Our battle-tested suite of proprietary valuation, liquidity and risk indicators along with extensive financial modelling ensure that we consistently deliver superior results

QUANTAMENTAL INVESTING

Quantamental investing: While measurable is reliable, we also believe the economy and markets cannot be captured completely by models and indicators. Human judgement that comes from years of trading and investing experience has immense value. For optimal results, our decision-making seeks to find the harmony between objectivity and subjectivity

MULTI-ASSET MANAGER

Multi-asset, multi-manager: We believe that safeguarding investor wealth is paramount. Apart from reducing risk by investing across asset classes, we take diversification to another dimension by ensuring every investment decision comes from a focused discussion between investment managers with a diverse set of capabilities and experience

MONEY FLOWS FROM ONE ASSET CLASS TO ANOTHER

Money flows from one asset class to another: Money is a form of economic energy - the quantification of human effort. As the world evolves, a dynamic set of ideas continuously lead the change. Money flows and grows with these pioneering ideas. Identifying them and the specific assets that benefit is the surest and most consistent method for generating wealth

TIMING IS EVERYTHING

Timing is everything: In our framework, time is a critical aspect of investing as the three dimensions of Valuation, Liquidity and Risk interact and move together in cycles across different periods. Alpha generation is optimised only by sanguine identification of the extremes.

VLRT

DYNAMIC REBALANCING

ADAPTIVE MONEY MANAGEMENT | VLRT FRAMEWORK

Being Relevant with 'predictive analytics'

The core engine that drives us and sets us apart is a robust and differentiated investment framework that enables us to see beyond the horizon and stay relevant. Our unique analytical framework for enabling 'predictive analytics' encompasses all available asset classes and sectors, formulating a multi-dimensional research perspective.

Why multi-dimensional?

The markets are a complex, dynamic system. There is no one formula or strategy or perspective that can consistently outperform. A diverse set of variables and participants are continuously interacting with each other in myriad ways.

In the face of this uncertainty and complexity, instead of limiting ourselves to any one school of thought we have found consistent success by studying markets along four dimensions: Valuation, Liquidity, Risk Appetite, and Time. [VLRT]

VALUATION

Knowing the difference between price and value.

RISK APPETITE

Perceiving what drives market participants to certain actions and reactions.

LIQUIDITY

Understanding the flow of money across asset classes.

TIME

Being in sync with the waves of value and behaviour

quant Dynamic Asset Allocation Fund (DAAF)

Normalized as of 12/04/2023 - Data as of Date 29/12/2023

quant Dynamic Asset Allocation Fund(% Return) 34.8370
CRISIL Hybrid 50+50 - Moderate Index 16.3863
Nifty 50 TRI (% Return) 23.1787

quant Dynamic Asset Allocation Fund (DAAF) offers highest flexibility to switch between low-risk debt and high risk equity instruments based on the Risk-On/Risk-Off environment. Minimum 65% equity exposure is maintained to avail equity taxation while derivatives can be used to hedge up to 100% of equity exposure. Brings maximum possible diversification in a single portfolio and moderates portfolio volatility by limiting extreme outcomes and optimizing inflection points. Active rebalancing is done to adapt to macro environment. This scheme is ideal for low risk appetite investors. This scheme has delivered a return of 34.84% in between April 12, 2023 and December 29, 2023 with a portfolio beta of 0.97.

§-ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets. ICRA uses the concept of 'credit scores'. These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

Glossary

The ratios provided are based on three years of historical data, where available.

Sharpe Ratio:

Definition: The Sharpe Ratio measures the risk-adjusted performance of an investment or portfolio. It measures portfolio returns generated in excess to the investment in risk-free asset, for per unit of total risk taken. While, positive Sharpe ratio indicates, portfolio compensating investors with excess returns (over risk-free rate) for the commensurate risk taken; negative Sharpe ratio indicates, investors are better off investing in risk-free assets.

Formula:

Sharpe Ratio = $(R_p - R_f) / \sigma_p$

R_p: Average return of the portfolio

R_f: Risk-free rate of return

σ_p: Standard deviation of the portfolio's returns

Interpretation:

A higher Sharpe Ratio indicates better risk-adjusted performance.

Sortino Ratio:

Definition: The Sortino Ratio is a variation of the Sharpe Ratio, focusing on the downside risk. It considers only the standard deviation of the negative returns (downside deviation) when assessing risk.

Formula:

Sortino Ratio = $(R_p - R_f) / \sigma_d$

R_p: Average return of the portfolio

R_f: Risk-free rate of return

σ_d: Downside deviation (standard deviation of negative returns)

Interpretation:

A higher Sortino Ratio indicates better risk-adjusted performance, but it specifically addresses the downside risk.

Jensen's Alpha:

Definition: Jensen's Alpha, also known as the Jensen Index or Jensen's Performance Index, measures the excess return of an investment or portfolio compared to its expected return, given its level of risk as measured by the capital asset pricing model (CAPM).

Formula:

Jensen's Alpha = $R_p - [R_f + \beta_p (R_m - R_f)]$

R_p: Actual portfolio return

R_f: Risk-free rate of return

β_p: Beta of the portfolio (systematic risk)

R_m: Market return

Interpretation:

A positive Jensen's Alpha suggests that the portfolio has outperformed its expected return based on its level of risk.

R-Squared:

Definition: R-Squared (Coefficient of Determination) measures the proportion of the variation in the portfolio's returns that can be explained by the variation in the benchmark's returns. It ranges from 0 to 1, where 0 indicates no correlation, and 1 indicates a perfect correlation.

Formula:

Calculated as part of the regression analysis comparing the portfolio's returns to the benchmark's returns.

Interpretation:

A higher R-Squared indicates a stronger correlation between the portfolio and its benchmark.

Downside Deviation:

Definition:

Downside Deviation measures the volatility of the returns that fall below a certain minimum acceptable return or threshold (often the risk-free rate).

Formula:

Standard deviation of returns that are below the threshold.

Interpretation:

A lower downside deviation suggests less volatility in the undesirable direction (below the threshold), indicating better risk management.

Upside Deviation:

Definition:

Upside Deviation measures the volatility of the returns that exceed a certain minimum acceptable return or threshold (often the risk-free rate).

Formula: Standard deviation of returns that are above the threshold.

Interpretation:

A lower upside deviation indicates less volatility in the favorable direction (above the threshold), suggesting a more stable and consistent performance in positive market conditions.

Example:

Assume the following data for Fund ABC and the benchmark over a specific period:

- Average Fund Return: 12%
- Risk-Free Rate: 3%
- Standard Deviation of Fund Returns: 15%
- Downside Deviation: 8%
- Beta (Systematic Risk): 1.2
- Market Return: 10%
- Actual Portfolio Return: 14%
- Correlation coefficient with the Market: 0.8
- Positive Returns: 5%, 8%, 12%, 15%, 18%
- Negative Returns: -2%, -4%, -1%, -5%, -3%

Sharpe Ratio = (Average Return - Risk-Free Rate) / Standard Deviation of Returns

Sharpe Ratio = (12% - 3%) / 15% = 0.6

Sortino Ratio = (Average Return - Risk-Free Rate) / Downside Deviation

Sortino Ratio = (12% - 3%) / 8% = 1.12

Jensen's Alpha = Actual Portfolio Return - [Risk-Free Rate + Beta * (Market Return - Risk-Free Rate)]

Jensen's Alpha = 14% - (3% + 1.2 * (10% - 3%)) = 2.6%

R-Squared = (Correlation coefficient)²

R-Squared = (0.8)² = 0.64

Downside Deviation = Square Root of (Average of Squared Negative Returns)

Downside Deviation ≈ Square Root of [(−2%)² + (−4%)² + (−1%)² + (−5%)² + (−3%)² / 5] ≈ 3.06%

Upside Deviation = Square Root of (Average of Squared Positive Returns)

Upside Deviation ≈ Square Root of [(5%)² + (8%)² + (12%)² + (15%)² + (18%)² / 5] ≈ 6.88%

How to read factsheet

Fund Manager: An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription: This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount: This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity: The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP: Systematic Investment Plan (SIP) works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹500 every 15th of the month in an equity fund for a period of three years. NAV The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses.

AUM: AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund.

Modified Duration: Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Rating Profile: Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Benchmark: A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the NIFTY, Sensex, BSE200, BSE500, 10-Year Gsec

Entry Load: A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at Rs.101. (Note SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor).

Exit Load: Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceed at net value of NAV less Exit Load. For instance if the NAV is Rs.100 and the exit load is 1%, the investor will receive Rs.99.
