Action Man Trump is currently leading the U.S. dominance in 'Grand Master Geopolitical Chess Tournament'

Dominance or disaster? There is so much to talk about this March month and this month also brings in significant inflexion points – not for just North America but for the entire world – Europe and China in particular. The recent actions of President Trump and his 'First Buddy' or his 'Key Think-tank,' Mr Elon Musk is increasing volatility in a very short period via their tweets and statements, and this is raising many eyebrows among allies and the relevance of NATO is under a severe question mark.

As a student of global macros, we have not seen such high acceleration in global geopolitics and this could be a disaster for global trade, forcing inflation to knock down our doors. His actions are furthering our endorsement of a long-term structural bull run in inflation and DM yields.

The key question is whether the U.S. will continue to remain the world's strongest nation or will suffer a decline with Trump's insular policies, which have not been passed by legislation and have been conducted through Executive Orders. Though President Trump is on a mission to protect America in his tenure, if it means global isolation for the U.S. in the coming few decades, and it will not end well for the U.S. in the long-term and it will impact the U.S. economy, its constitution and congress too.

Everything has consequences and the key question is, has Trump, together with his team, thought about any consequences at all!

Though the DXY index has achieved our medium-term target, it has corrected quite meaningfully despite Trump's noise and narratives. March is seasonally a bullish month and the Dollar Index still remains our biggest 'Perceived Risk' and we should watch out for global currencies and global yields as they will dictate the 2025 macro outlook.

For crude oil, March is seasonally bullish and downside is very limited but upside could be meaningful in Q2 of 2025. Even for Bitcoin, the month of March is seasonally bullish and with current global uncertainties, Bitcoin would be an ideal investment for high risk appetite global investors.

For precious metals and Gold in particular, March is seasonally bearish and from a very near-term perspective, Gold had peaked out and has potential to correct by 6-9% in dollar terms. However, our medium-term and long-term views are equally constructive and we reiterate that a meaningful percentage of your portfolio should be dedicated towards precious metals. Gold has already achieved our medium-term target and we are re-approaching a resistance zone in the month of April, 2025.

Coming to global equities, March is seasonally bullish, but the current vulnerability in U.S. equity is high as our quant Complacency Indicators have made new all-time highs and have started correcting. Global equity flows towards DMs are also at all-time highs and still rising. Therefore, an important high is in place in U.S. equity and the Nasdaq in particular. Although a near-term pullback is probable, the medium-term trend is weak and the month of March will be quite challenging for global equity.

India equity has been in a corrective phase for the past few months as the 'Risk-off' cycle peaked out in July '24 and our 'Predictive Analytics' models are now suggesting that we have covered 60% of the journey and therefore select buying opportunities are visible in sectors viz. Infrastructure, Hotels & Hospitality, Pharmaceuticals, Materials, Retail and Telecom.

The Nifty 500 represents the top 500 companies based on full market capitalisation and average daily turnover from the eligible universe. The Nifty 500 represents about 92% of the free float market capitalization of the stocks listed on the NSE and it also represents approximately 82% of the traded value of all stocks on NSE. Therefore, we do most of our Analytics around broader indices viz. Nifty 500 or BSE 500 and our analytics are now showcasing that a **trading bottom is round the corner**. Hence, we are participating in both large and mega-large caps, while selectively increasing our small cap exposures in most of our equity schemes.

We are focused on long-term growth and are committed to managing your investments with utmost care and diligence. Even as we grew over the years, we managed to keep our **investor concentration risk low**, thereby creating a more balanced and sustainable foundation for our portfolios. With a diversified investor base, mainly made up of individual investors, our long-term growth and success is supported by a broader and more resilient group of stakeholders and hence reduced volatility. This has fostered innovation and more opportunities for diverse perspectives within our decision-making process. It also aligns with our core values of transparency, long-term growth, and fostering meaningful relationships with a wide range of investors. We remain committed to driving value for all of our stakeholders and ensuring that our business continues to thrive in a dynamic market environment.

Our overall portfolio remains tilted towards large and mega large caps and overall liquidity of the portfolio is good; high cash levels in most of our schemes will be used to deploy in the falling markets. Thank you for your continued trust and partnership.

TIMING IS EVERYTHING

The ebb and flow of the financial markets has always been a subject of intrigue, as the winds of change can bring both prosperity and adversity. It is a dance between the forces of the past and the potential of the future, as investors must determine whether a shift in the seemingly random, continuous gyrations of the market, signifies a trend reversal or is just a fleeting pause in the beat of a larger drum of the existing trend. This inquiry into the nature of the markets, of the patterns it weaves as it finds the truth amongst the trillions of combined calculations of all the computing and human brain power at work to figure it out, is a complex, reflexive and elusive endeavour, requiring a deep understanding of the forces that shape it. Timing, in this context, becomes a symphony of intuition and critical analysis, as it helps one harmonize with the markets and seize the opportunities they present.

Investing success depends on the ability to hear every footstep of the markets and act in concert with their movements.

There is considerable academic research with empirical evidence that the biased focus on conventional fundamental analysis helps managers generate alpha by buying at the right time, but their selling decisions underperform substantially, even relative to random selling. Put bluntly, a random set of sell decisions would do better than the average money manager. We believe this is a significantly overlooked factor in investing, and one, that we want to move beyond, by giving primary importance to the timing of our decisions. It is the essence of adaptive asset allocation – adapt and generate alpha, or underperform.

Though its conventionally considered a risky strategy, we have a different perspective – **timing and investing are inseparable activities**. Any investing act has a component of timing that irreversibly affects the value derived from the investment. In contemporary times, this observation is even backed up by the US Federal Reserve's role in the global financial system. The timing of rate decisions is paramount in determining whether policy action is constructive or destructive and even the US Fed recognizes this simple fact. By logical extension, the entire global financial system is based on the same principle which we explicitly state as a core part of our money management – 'timing is everything'.

We believe investing with a 'perpetuity' mindset leads to sub-optimal results as it leads to value traps, more detrimental effects of behavioral biases, as well as leads to a comfortable but static approach in an ever-changing world. Long-term investing is about staying invested in markets while dynamically timing the asset allocation and sector rotation. This approach may have worked during a unidirectional multi-decade trend, however, in the period of radical change that we are in now, dynamic money management has become necessary. The science of timing needs to be given focus at par with other dimensions of investing.

Time manifests itself in the world through probability distributions. There is never a fixed future, only probabilities of possible futures. **Effective money management is about investing based on how these ripples in time manifest through the dimensions of risk, liquidity and valuations.** Through the Predictive Analytics set of indicators and VLRT investment framework, we have designed and implemented a money management process that is probabilistic by design.

The vision is to position better and mitigate risk of future market movements by quantifying possible future states of the global order and taking decisions that are the result of probabilistic weights.

Investment Philosophy

In a dynamic world that is continuously changing due to technology and increasingly volatile geopolitics, passive investment strategies can no longer outperform. Alpha belongs to active strategies that can invest in sync with the dynamics at play.

Being relevant comes by staying **active**

We believe consistent outperformance requires complete freedom from looking at the world relatively. It is why we design investment strategies with an absolute objective irrespective of market conditions. With this absolute objective, comes clarity of thought

Being relevant requires an **absolute** focus on returns

Embedded within our processes and systems is the conviction that the surest way to success in investing is through cultivation of a multitude of opinions and perspectives. By bringing together this diversity of ideas within our investment framework, we aim to unearth every possible opportunity in any set of circumstances

Being relevant means having an **unconstrained** perspective

fundamental is the atman,
liquidity the prana,
sentiments the maya

Core Beliefs

One of the oldest scriptures and philosophy in the world is the Vedic philosophy. These scriptures are a comprehensive effort to describe all aspects of the universe and human existence. To undertake this gigantic task, they rely on three core ideas - Atman, Prana and Maya. These ideas are the inspiration for our perspective on investment research and money management

FUNDAMENTAL
IS THE **atman**

'Atman' is the 'true' or 'absolute' self of a person, beyond all names and subjective judgements that the world and the person choose to apply on themselves. In that sense, real assets and profit-generating capacity of all economic entities and participants are the 'fundamentals' underlying every kind of market. **Without the Atman, an individual cannot exist. Similarly, without fundamentals, value cannot persist**

LIQUIDITY
THE **prana**

'Prana' refers to universal energy in all its forms. It is the vibrational force that makes every electron and atom vibrate and move. For markets, the dynamic flow of money which we study as liquidity, enables participants to undertake economic activity and create an ecosystem. **While Prana enables life, liquidity imparts a 'value' to assets and organisations.**

SENTIMENTS
THE **maya**

'Maya' depicts the illusion of this world as subjectively experienced by all humans. Each person imagines the world to be in a peculiar way, based on their own opinions and perceptions, and lives accordingly. 'Price' is the illusion market participants assign to every economic unit, according to their subjective ideas of the present and the future, based on a myriad assumptions, experiences and predictions. **Maya is the intricate illusion of this universe created by our minds and price is the ever-changing perception of economic value created by investors**

Pioneers of Dynamic Money Management

"We are in the business of risk management, returns are a by-product"

Investment Principles

MEASURABLE IS RELIABLE

Measurable is reliable: For success in investing, discipline is of more importance than any other attribute of the investment process. Our battle-tested suite of proprietary valuation, liquidity and risk indicators along with extensive financial modelling ensure that we consistently deliver superior results

QUANTAMENTAL INVESTING

Quantamental investing: While measurable is reliable, we also believe the economy and markets cannot be captured completely by models and indicators. Human judgement that comes from years of trading and investing experience has immense value. For optimal results, our decision-making seeks to find the harmony between objectivity and subjectivity

MULTI-ASSET MANAGER

Multi-asset, multi-manager: We believe that safeguarding investor wealth is paramount. Apart from reducing risk by investing across asset classes, we take diversification to another dimension by ensuring every investment decision comes from a focused discussion between investment managers with a diverse set of capabilities and experience

MONEY FLOWS FROM ONE ASSET CLASS TO ANOTHER

Money flows from one asset class to another: Money is a form of economic energy - the quantification of human effort. As the world evolves, a dynamic set of ideas continuously lead the change. Money flows and grows with these pioneering ideas. Identifying them and the specific assets that benefit is the surest and most consistent method for generating wealth

TIMING IS EVERYTHING

Timing is everything: In our framework, time is a critical aspect of investing as the three dimensions of Valuation, Liquidity and Risk interact and move together in cycles across different periods. Alpha generation is optimised only by sanguine identification of the extremes.

VLRT

Being Relevant with 'predictive analytics'

The core engine that drives us and sets us apart is a robust and differentiated investment framework that enables us to see beyond the horizon and stay relevant. Our unique analytical framework for enabling 'predictive analytics' encompasses all available asset classes and sectors, formulating a multi-dimensional research perspective.

Why multi-dimensional?

The markets are a complex, dynamic system. There is no one formula or strategy or perspective that can consistently outperform.

A diverse set of variables and participants are continuously interacting with each other in myriad ways.

In the face of this uncertainty and complexity, instead of limiting ourselves to any one school of thought we have found consistent success by studying markets along four dimensions: Valuation, Liquidity, Risk Appetite, and Time [VLRT]

VALUATION

Knowing the difference between price and value.

RISK APPETITE

Perceiving what drives market participants to certain actions and reactions.

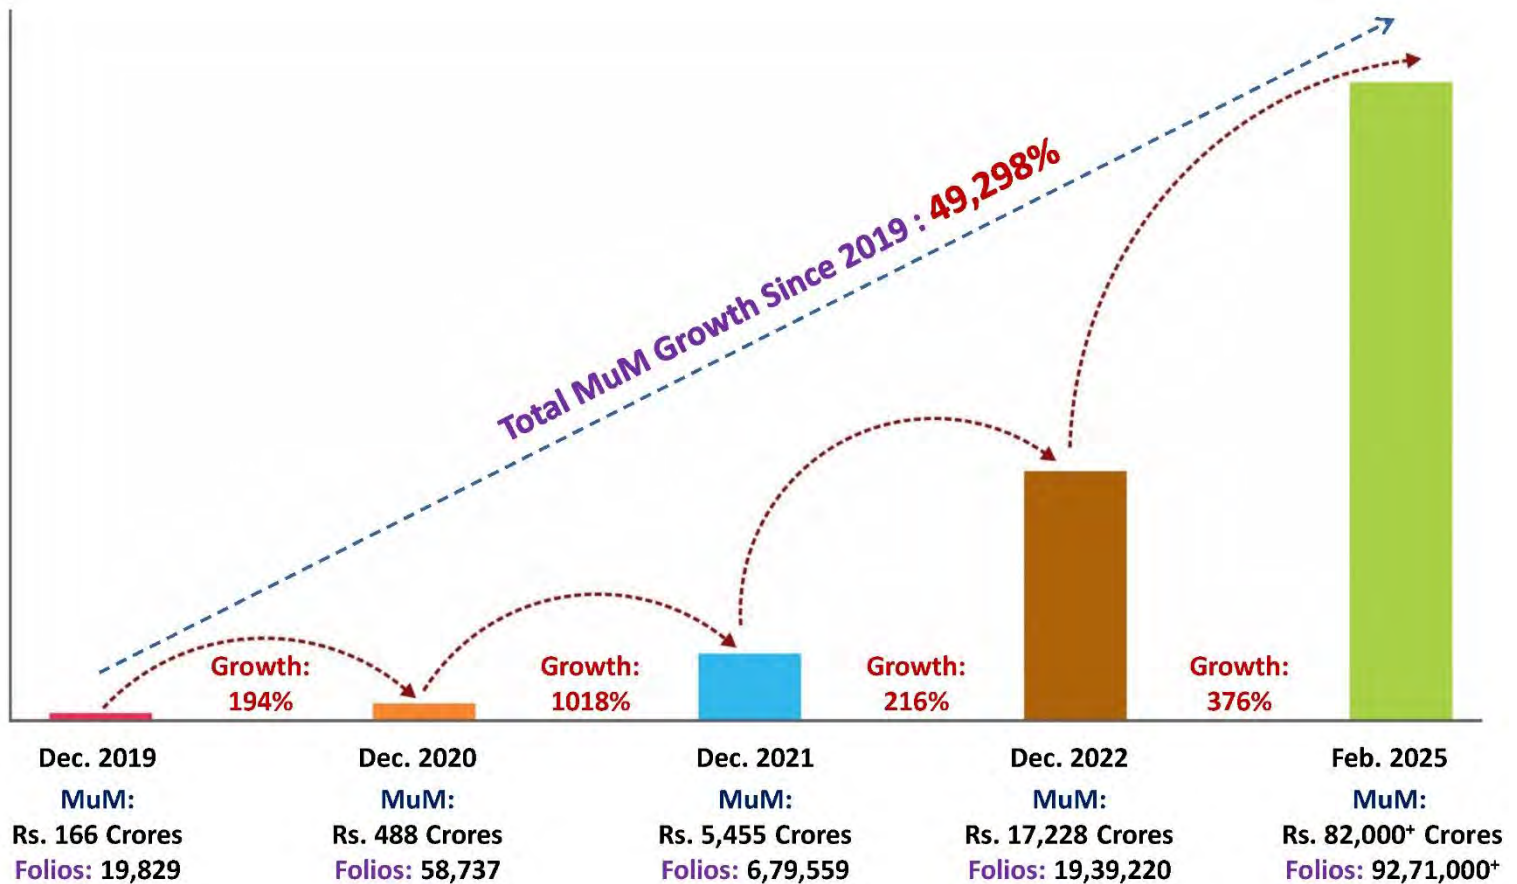

TIME

Being in sync with the waves of value and behaviour

LIQUIDITY

Understanding the flow of money across asset classes.

Risk-adjusted Measures - A Pragmatic Approach to Portfolio Evaluation

As per Portfolio Analytics & Risk Metrics, measures viz. Standard Deviation, Portfolio Beta, Portfolio Trailing P/E Ratio and Portfolio Turnover Ratio, **when considered in isolation, do not provide a comprehensive depiction of a fund's returns and risk profile.**

Standard deviation measures the dispersion of returns around the mean, assuming a normal distribution of returns. However, it **doesn't differentiate between upside and downside volatility**. High standard deviation may indicate high volatility, but does not necessarily capture the direction of the volatility.

Beta calculation based on NAV data is less relevant and Portfolio Beta (Weighted average Beta of all stocks in the Portfolio; provided in our monthly factsheet) is more relevant from the perspective of portfolio management and this is a true representation because of its accuracy in reflecting actual holdings, consideration of active management decisions, customization to the portfolio's risk profile and dynamic responsiveness to market changes.

Trailing P/E ratio alone does not capture the future growth prospects of the portfolio and therefore we should also look at the **forward P/E ratio**. Trailing P/E ratio is backward-looking and doesn't provide insights into the future earnings potential.

Portfolio turnover ratio is an **irrelevant measure** because whether the portfolio turnover is high or low does not inherently provide meaningful information about the portfolio's ability to generate returns or manage risk. **Globally for all active money managers, Portfolio Turnover Ratio is naturally high as they dynamically rebalance their portfolio based on Risk-On or Risk-Off environment.**

Therefore, **investors should focus on other performance metrics and factors such as risk-adjusted returns and investment strategy** when evaluating the quality of a portfolio. **Ratios such as Sharpe Ratio, Sortino Ratio, Jensen's Alpha, Upside and Downside Deviation, and Upside Capture and Downside Capture Ratios provide a more comprehensive assessment** of risk-adjusted performance by incorporating both risk and return metrics, thereby offering a clearer picture of a fund's overall performance, risk profile and the fund's ability to outperform benchmarks, providing investors with a more nuanced understanding of the fund's performance relative to its risk exposure.

- quant Quantamental Fund - Direct (G) (% Return) 108.0705
- Nifty 200 TR Index (% Return) 64.1588
- Nifty 50 TRI (% Return) 58.4083

quant Quantamental Fund is a a unique scheme which is designed to manage both short-term and medium-term risk efficiently and this not only reduces the risk but also generates alpha in the medium-term. This scheme is ideal for long-term investors with medium risk appetite. This scheme has a delivered a return of 108.57% in between April 30, 2021 and February 28, '25 with a portfolio beta of 1.00.

Investment Objective: The investment objective of the Scheme is to deliver superior returns as compared to the underlying benchmark over the medium to long term through investing in equity and equity related securities. The portfolio of stocks will be selected, weighed and rebalanced using stock screeners, factor based scoring and an optimization formula. However, there can be no assurance that the investment objective of the scheme will be realized.

quant PSU Fund

Primarily invests in PSUs that benefit from increased capex and reforms and poised to become stronger and more dynamic across sectors in the coming decades. The fund seeks to leverage the potential value of PSU stocks unlocked through disinvestment or divestment, and benefit from their significant contribution towards making India the world's third-largest economy. The scheme tilts exposure to select emerging themes with PSU dominance and concentrates mostly on 6-8 focused opportunities, that are expected to be on the cusp of a growth cycle, as evaluated through macro-economic analytics quant PSU Fund has a return of -10.11% between February 20, 2024 – February 28, '25 with a portfolio beta of 1.20

*Fostering economic growth,
and maintaining stability*

quant Healthcare Fund

Normalized as of 17/07/2023 - Data as of Date 28/02/2025

— quant Healthcare Fund - Direct (G) (% Return) 35.4980
 — NIFTY Healthcare TRI 40.7004
 — Nifty 50 TRI (% Return) 14.3577

quant Healthcare Fund scheme invests in healthcare, life sciences, insurance and wellness companies that are expected to benefit from increased investments in healthcare infrastructure and service delivery, including advanced medical technology. The scheme has flexibility to invest in companies, across market caps, to optimize risk return payoff. As inflexion point strategists, we will construct a focused or diversified portfolio, based on the sub-sector outlook. This scheme has delivered a return of 35.50% in between July 17, 2023 and February 28, '25 with a portfolio beta of 0.71.

quant Commodities Fund

Normalized as of 27/12/2023 - Data as of Date 28/02/2025

— quant Commodities Fund - Direct (G) (% Return) 16.1590
 — Nifty Commodities TRI 0.5682
 — Nifty 50 TRI (% Return) 3.6204

Major investment into commodity-linked stocks provides exposure to management efficiency, new and emerging profitable business lines, and best practices of those companies leading to potentially robust long term portfolio performance. Broad asset allocation permits investment in Gold and Silver Exchange Traded Funds (ETFs) to derive higher positive beta during cyclical upturns. The portfolio will be managed through a flexi cap approach that seeks to onboard opportunities across a wide swathe of sectors falling broadly under Commodities, Energy, Diversified, and Utilities. quant Commodities Fund has a return of 16.16% between December 27, 2023 – February 28, '25 with a portfolio beta of 1.14

quant Gilt Fund

Normalized as of 22/12/2022 - Data as of Date 28/02/2025

— quant Gilt Fund - Direct (G) (% Return) 17.5130
— CRISIL Dynamic Gilt Index (% Return) 19.4153

quant Gilt Fund invests in Central and State government securities across maturities and other debt instruments. The fund takes duration calls based on the underlying interest rate view and actively manages interest rate risk. It aims to play across the interest rate curve by investing in G-secs across maturities to generate capital gains. This scheme is ideal for risk-averse investors with very low risk appetite. This scheme has delivered a return of 17.51% between December 22, 2022 and February 28, '25.

Liquidity Analytics

- Liquidity Analytics indicates number of days that will be required to liquidate 50% and 25% of the portfolio respectively on a pro-rata basis, under certain conditions.
- For this 3 times the combined volumes on NSE and BSE has been considered.
- Assuming a participation of 10%, number of days to liquidate each stock is calculated.
- While calculating the time taken to liquidate portfolio on pro-rata basis, the 20% of least liquid securities of the portfolio are ignored.
- The number of days required to liquidate the balance portfolio shall be the maximum number of days required for liquidating a stock in such portfolio. Such number of days would be divided by two to indicate the days required for liquidating 50% portfolio and by four to indicate days required to liquidate 25% of the portfolio.
- The above methodology is as per the guidelines issued by AMFI in consultation with SEBI in relation to mid and small cap schemes. We are extending the same methodology to all our schemes and its respective benchmarks as well, after rebasing the size of the benchmark to the respective schemes' AUM.

How to read the Factsheet?

INVESTMENT OBJECTIVE

The investment objective of a fund describes its purpose and goals, outlining the intended outcomes for investors. It typically specifies the type of securities the fund will invest in and whether the objective is capital appreciation, income generation, preservation of capital, or a combination thereof. Understanding the fund's objective is crucial for investors to evaluate whether the fund's strategy resonates with their own financial objectives.

INCEPTION DATE

The inception date marks the starting point from which the fund's performance and history are measured. It is important for investors because it provides insight into the fund's track record, allowing them to assess historical performance and other key metrics since inception.

CONTRIBUTION BY MARKET CAP

Market capitalization (commonly known as market cap) is calculated by multiplying a company's outstanding shares by its stock price per share. The contribution by market cap indicates the proportion of the fund's assets invested in companies of different sizes, typically categorized into:

- Large-cap: Top 100 listed companies based on previous 6 month average market cap.
- Mid-cap: Next 150 listed companies based on previous 6 month average market cap.
- Small-cap: All companies beyond top 250 listed companies based on previous 6 month average market cap.

Fund's allocation towards different market capitalization is subject to its allocation limits as specified in the Scheme Investment Document (SID).

Moreover, this allocation also underscores the fund's prevailing investment strategy, which is influenced by the risk-off/risk-on dynamics observed across various market cycles.

PORTFOLIO CONCENTRATION

This data helps in understanding the extent to which the fund's assets are invested in a limited number of securities (commonly known as portfolio concentration). It indicates how diversified or concentrated the portfolio is.

The level of portfolio concentration can impact the fund's risk and return profile. A concentrated portfolio may offer the potential for higher returns if the selected securities perform well, but it also carries higher risks due to the lack of diversification. On the other hand, a diversified portfolio aims to reduce risk by spreading investments across different securities, potentially mitigating the impact of poor performance from any single security; however, it may also limit the potential for outsized returns if a particular sector or security experiences significant growth.

INVESTOR CONCENTRATION

Investor concentration refers to the distribution of AUM among the fund's investors. It's essentially the extent to which the fund's AUM is held by a relatively small number of investors versus being spread across a larger investor base.

MONEY MANAGERS

Fund managers are experienced professionals with expertise in financial markets, securities analysis, and portfolio management. Their knowledge and skills are essential for selecting suitable investments, managing risk, and optimizing returns for investors. They are tasked with constructing and rebalancing the fund's portfolio to achieve its investment objectives. They decide which securities to buy, hold, or sell based on market conditions, economic trends, and the fund's strategy.

BENCHMARK INDEX

Benchmark indices serve as reference points for investors, providing a standard against which they can evaluate a fund's performance. These indices represent specific market segments or asset classes and act as benchmarks for measuring the relative success of funds. Comparing a fund's performance to its benchmark index helps investors gauge how effectively the fund's manager has achieved investment objectives and managed risk.

RISKOMETER

The risk-o-meter is a standardized tool depicted through a pictorial meter implemented by market regulators to quantify the level of risk associated with investing in a particular fund. It is typically graphic representation which ranks funds on a scale from low to high risk namely (i) low, (ii) moderately low, (iii) moderate, (iv) moderately high and (v) high., helping investors assess the risk profile of a fund before investing. By understanding the risk level indicated by the risk-o-meter, investors can align their investment decisions with their risk tolerance and financial goals, ensuring they select funds that match their preferences for risk and return.

How to read the Factsheet?

PORTFOLIO TOP HOLDING

The Top Holding in a fund refers to the fund's largest investment holdings, typically representing the highest allocation of assets within the portfolio. For investors, understanding the top holdings is crucial as it provides insight into the fund's investment strategy and the sectors or companies the fund manager believes offer the most potential. By knowing the top holdings, investors can assess the fund's diversification, concentration, and alignment with their own investment objectives. Monitoring changes in Top Holdings over time can also reveal shifts in the fund manager's strategy or market trends.

RELATIVE WEIGHTAGE

This graph represents how the fund's sectoral exposure differs from the market benchmark. By identifying over- or underweight sectors, investors can gauge the fund manager's active decisions and provide insights into the fund manager's sectoral preferences, deviations from the benchmark, and potential sources of outperformance or underperformance. This data helps to evaluate the fund's positioning and sector rotation strategy.

EXIT LOAD

Exit load refers to a fee charged by the fund when an investor redeems or sells their units within a specified period after purchasing them. This fee is designed to discourage short-term trading and to cover administrative costs associated with processing redemptions. Exit loads are typically expressed as a percentage of the redeemed amount and vary depending on the scheme and the duration for which the investment was held. Investors should be aware of exit loads before investing as they can affect the overall returns, especially for short-term investments.

SCHEME PERFORMANCE

By providing the funds' historical performance data, a clear picture is obtained of how the fund has fared in the market across time frames. In line with the SEBI Regulations, fund fact sheet discloses the scheme performance for the 1-year, 3-year, 5-year period and from the scheme inception date. Further, the performance of the benchmark index (Total Return Index) is also shared along with the scheme performance for ease of comparison by the investors. The scheme performance for the period longer than one year is disclosed in CAGR (Compounded Annual Growth Returns) terms.

SIP RETURNS

SIP returns refer to the returns generated by investing through a systematic investment plan. SIP is a method of investing a fixed amount regularly, into a mutual fund scheme. SIP returns reflect the compounded growth of investments made through SIP over a specific period. Since SIP involves investing fixed amounts at regular intervals, it helps investors benefit from rupee-cost averaging and may potentially reduce the impact of market volatility on their investments.

RISK ADJUSTED MEASURES

As per Portfolio Analytics & Risk Metrics, measures viz. Standard Deviation, Portfolio Beta, Portfolio Trailing P/E Ratio and Portfolio Turnover Ratio, when considered in isolation, do not provide a comprehensive depiction of a fund's returns and risk profile. Standard deviation measures the dispersion of returns around the mean, assuming a normal distribution of returns. However, it doesn't differentiate between upside and downside volatility. High standard deviation may indicate high volatility, but does not necessarily capture the direction of the volatility. Beta calculation based on NAV data is less relevant and Portfolio Beta (Weighted average Beta of all stocks in the Portfolio; provided in our monthly factsheet) is more relevant from the perspective of portfolio management and this is a true representation because of its accuracy in reflecting actual holdings, consideration of active management decisions, customization to the portfolio's risk profile and dynamic responsiveness to market changes. Trailing P/E ratio alone does not capture the future growth prospects of the portfolio and therefore we should also look at the forward P/E ratio. Trailing P/E ratio is backward-looking and doesn't provide insights into the future earnings potential. Portfolio turnover ratio is an irrelevant measure because whether the portfolio turnover is high or low does not inherently provide meaningful information about the portfolio's ability to generate returns or manage risk. Globally for all active money managers, Portfolio Turnover Ratio will naturally be high as they dynamically rebalance their portfolio based on Risk-On or Risk-Off environment. Therefore, investors should focus on other performance metrics and factors such as risk-adjusted returns and investment strategy when evaluating the quality of a portfolio. Ratios such as Sharpe Ratio, Sortino Ratio, Jensen's Alpha, Upside and Downside Deviation, and Upside Capture and Downside Capture Ratios provide a more comprehensive assessment of risk-adjusted performance by incorporating both risk and return metrics, thereby offering a clearer picture of a fund's overall performance, risk profile and the fund's ability to outperform benchmarks, providing investors with a more nuanced understanding of the fund's performance relative to its risk exposure.

Glossary

The ratios provided are based on historical data, where available.

Sharpe Ratio:

Definition: The Sharpe Ratio measures the risk-adjusted performance of an investment or portfolio. It measures portfolio returns generated in excess to the investment in risk-free asset, for per unit of total risk taken. While, positive Sharpe ratio indicates, portfolio compensating investors with excess returns (over risk-free rate) for the commensurate risk taken; negative Sharpe ratio indicates, investors are better off investing in risk-free assets.

Formula:

$$\text{Sharpe Ratio} = (R_p - R_f) / \sigma_p$$

R_p: Average return of the portfolio

R_f: Risk-free rate of return

σ_p: Standard deviation of the portfolio's returns

Interpretation:

A higher Sharpe Ratio indicates better risk-adjusted performance.

Sortino Ratio:

Definition: The Sortino Ratio is a variation of the Sharpe Ratio, focusing on the downside risk. It considers only the standard deviation of the negative returns (downside deviation) when assessing risk.

Formula:

$$\text{Sortino Ratio} = (R_p - R_f) / \sigma_d$$

R_p: Average return of the portfolio

R_f: Risk-free rate of return

σ_d: Downside deviation (standard deviation of negative returns)

Interpretation:

A higher Sortino Ratio indicates better risk-adjusted performance, but it specifically addresses the downside risk.

Jensen's Alpha:

Definition: Jensen's Alpha, also known as the Jensen Index or Jensen's Performance Index, measures the excess return of an investment or portfolio compared to its expected return, given its level of risk as measured by the capital asset pricing model (CAPM).

Formula:

$$\text{Jensen's Alpha} = R_p - [R_f + \beta_p (R_m - R_f)]$$

R_p: Actual portfolio return

R_f: Risk-free rate of return

β_p: Beta of the portfolio (systematic risk)

R_m: Market return

Interpretation:

A positive Jensen's Alpha suggests that the portfolio has outperformed its expected return based on its level of risk.

R-Squared:

Definition: R-Squared (Coefficient of Determination) measures the proportion of the variation in the portfolio's returns that can be explained by the variation in the benchmark's returns. It ranges from 0 to 1, where 0 indicates no correlation, and 1 indicates a perfect correlation.

Formula:

Calculated as part of the regression analysis comparing the portfolio's returns to the benchmark's returns.

Interpretation:

A higher R-Squared indicates a stronger correlation between the portfolio and its benchmark.

Downside Deviation:

Definition: Downside Deviation measures the volatility of the returns that fall below a certain minimum acceptable return or threshold (often the risk-free rate).

Formula:

Standard deviation of returns that are below the threshold.

Interpretation:

A lower downside deviation suggests less volatility in the undesirable direction (below the threshold), indicating better risk management.

Upside Deviation:

Definition: Upside Deviation measures the volatility of the returns that exceed a certain minimum acceptable return or threshold (often the risk-free rate).

Formula: Standard deviation of returns that are above the threshold.

Interpretation:

A lower upside deviation indicates less volatility in the favorable direction (above the threshold), suggesting a more stable and consistent performance in positive market conditions.

Example:

Assume the following data for Fund ABC and the benchmark over a specific period:

Average Fund Return: 12%

- Risk-Free Rate: 3%

- Standard Deviation of Fund Returns: 15%

- Downside Deviation: 8%

- Beta (Systematic Risk): 1.2

- Market Return: 10%

- Actual Portfolio Return: 14%

- Correlation coefficient with the Market: 0.8

- Positive Returns: 5%, 8%, 12%, 15%, 18%

- Negative Returns: -2%, -4%, -1%, -5%, -3%

Sharpe Ratio = (Average Return - Risk-Free Rate) / Standard Deviation of Returns

Sharpe Ratio = (12% - 3%) / 15% = 0.6

Sortino Ratio = (Average Return - Risk-Free Rate) / Downside Deviation

Sortino Ratio = (12% - 3%) / 8% = 1.12

Jensen's Alpha = Actual Portfolio Return - [Risk-Free Rate + Beta * (Market Return - Risk-Free Rate)]

Jensen's Alpha = 14% - (3% + 1.2 * (10% - 3%)) = 2.6%

R-Squared = (Correlation coefficient)²

R-Squared = (0.8)² = 0.64

Downside Deviation = Square Root of (Average of Squared Negative Returns)

Downside Deviation ≈ Square Root of [(-2%)² + (-4%)² + (-1%)² + (-5%)² + (-3%)² / 5] ≈ 3.06%

Upside Deviation = Square Root of (Average of Squared Positive Returns)

Upside Deviation ≈ Square Root of [(5%)² + (8%)² + (12%)² + (15%)² + (18%)² / 5] ≈ 6.88%

§-ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of 'credit scores'. These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.
