§-ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of 'credit scores'. These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

Investment Approach

Majority of assets are invested in **highest rated papers (A1+/AAA or equivalent)** to maintain superior credit profile.

High emphasis on liquidity of assets by employing a **healthy mix of bank and NBFC papers in the portfolio.**

The fund assumes a **low interest rate risk.**

Finger on the pulse of liquidity situation in the economy and monitoring the RBI Monetary Policy affecting the **dynamics of credit flow.**

Reasons to Buy

- A short term investment for surplus funds with an **emphasis on capital protection and delivering optimum yields.**
- Aims to provide **high liquidity and is an ideal interim investment avenue** pending longer term deployment/ investment.
- **No compromise on portfolio quality** as only assets with the **highest credit ratings** are taken into the portfolio.
- Maintains **appropriate duration** to cash in on opportunities.

VLRT Framework | Adaptive Money Management

Being Relevant with 'predictive analytics'

VALUATION ANALYTICS

Knowing the difference between price and value.

RISK APPETITE ANALYTICS

Perceiving what drives market participants to certain actions and reactions.

TIMING

Being in sync with the waves of value and behaviour

LIQUIDITY ANALYTICS

Understanding the flow of money across asset classes.

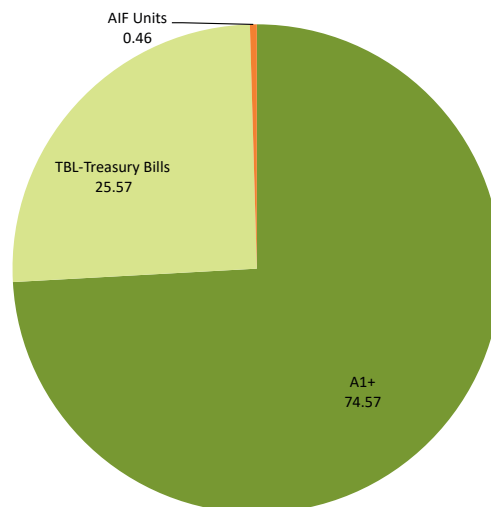

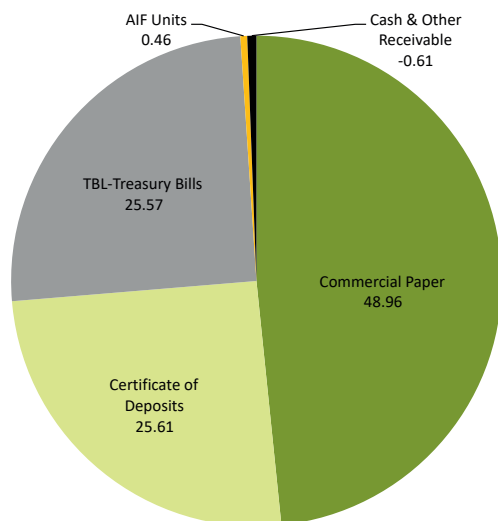

The core engine that drives us and sets us apart is a **robust and differentiated investment framework that enables us to see beyond the horizon and stay relevant.** Our unique analytical framework for enabling 'predictive analytics' encompasses all available asset classes and sectors, formulating a multi-dimensional research perspective.

Why multi-dimensional?

The markets are a complex, dynamic system. There is no one formula or strategy or perspective that can consistently outperform. **A diverse set of variables and participants are continuously interacting with each other in myriad ways.**

In the face of this uncertainty and complexity, instead of limiting ourselves to any one school of thought **we have found consistent success by studying markets along four dimensions: Valuation, Liquidity, Risk Appetite, and Time [VLRT].**
