Investment Strategy	<p>The underlying theme driving the relative allocation will be quant Money Managers Limited (qMML) research's 'quantamental' investment strategies. qMML believes that a quantitative approach to money management would yield optimal results when combined with the value of human judgement as rules or factors can behave differently when the entire market environment changes, such as our predictive analytics tools suggest. Thus, the quantamental approach seeks to find the harmony between objectivity and subjectivity.</p> <p>In order to provide the best possible returns and capital preservation, the quantamental approach goes beyond purely factor-based, smart beta or algorithmic strategies. We believe a rules-based mechanical approach needs to be combined with the value of years of human judgement and experience to yield 'adaptive alpha' - the outperformance generated by an ability to adapt investment rules/factors to novel market phases. Thus, we augment traditional quantitative and qualitative methods alongwith 'sentiments data' - a deep knowledge of market structure dynamics, micro level stock selection and inflexion point identification between bouts of greed and fear through analysis of the larger, ever-changing macro environment.</p> <p>Quantamental combines the innate human ability to adapt, adding to the alpha generated by discipline and identification of underlying factors - adaptive alpha, providing the edge needed to manage volatility and utilize periodic market imbalances to the portfolio's advantage.</p> <p>qMML may, from time to time, review and modify the Scheme's investment strategy if such changes are considered to be in the best interests of the unitholders and if market conditions warrant it. No assurance can be given that the fund manager will be able to identify or execute such strategies.</p> <p>The fund will invest in stocks from a universe of NIFTY 200 TRI selected on the basis of a quantamental models. Quantitative methods will be used for (i) screening mechanism to choose best picks and make the stock selection universe smaller, (ii) Deciding on the portfolio weightage for better return as the investment will focus on company's size and liquidity.</p> <p>The qualitative model which will be used for stock selection will be based on two broad parameters viz., Stock Price movement & Financial/ valuation aspects. The model will use aspects like:</p> <ul style="list-style-type: none"> • Stock Price related parameters – This would include stock specific aspects like relative strength, liquidity and volatility, Historic Performance (based on quarterly and annual relative and absolute price movement). • Financial/ Valuation parameters – This would include aspects based on a company's Balance sheet, cash flow statement & profit & loss account. The parameters are Sales growth (Historical), Earning before Interest and tax (EBIT) & Free Cash flows. (Historical), Dividend yield, Price to book ratio (PB), Return ratios, etc. <p>The portfolio is reviewed on dynamic basis and changes are made based on the data</p>

	generated by the model and on the discretion of the fund manager. The change in the portfolio involves both sale and purchase, both partial and complete, of the existing stocks and purchase of new stocks, if any.
