This Key Information Memorandum (KIM) sets forth the information, which a prospective investor ought to know before investing. For further details of the scheme/Mutual Fund, due diligence certificate by the AMC, Key Personnel, investors' rights & services, risk factors, penalties & pending litigations, associate transactions etc. investors should, before investment, refer to the Offer Document available free of cost at any of the Investor Service Centres or distributors or from the website www.quantmutual.com

The Scheme particulars have been prepared in accordance with Securities and Exchange Board of India (Mutual Funds) Regulations 1996, as amended till date, and filed with Securities and Exchange Board of India (SEBI). The units being offered for public subscription have not been approved or disapproved by SEBI, nor has SEBI certified the accuracy or adequacy of this KIM.

This Key Information Memorandum is dated \_\_\_\_\_.

### Investment Objective

The investment objective of the Scheme is to deliver superior returns as compared to the underlying benchmark over the medium to long term through investing in equity and equity related securities. The portfolio of stocks will be selected, weighed and rebalanced using stock screeners, factor based scoring and an optimization formula which aims to enhance portfolio exposures to factors representing 'good investing principles' such as growth, value and quality within risk constraints.

### Asset Allocation Pattern of the scheme

Asset Class Allocation	Normal Allocation (% of net assets)	Risk Profile
Equity and equity related instruments	80-100	Medium to High
Debt & Money Market instruments	0-20	Low to Medium
Units issued by REITs & InvITs	0-5	Medium to High

The Scheme retains the flexibility to invest across all the securities in the debt and money markets as permitted by SEBI / RBI from time to time, including schemes of mutual funds.

The Scheme may seek investment opportunities in foreign securities including ADRs / GDRs / Foreign equity and debt securities subject to the Regulations. Such investment shall not exceed 20% of the net assets of the Scheme.

The Scheme intends to initially invest US \$ 50 million in

overseas securities subject to maximum limit specified in SEBI circulars. The above limits will be valid for six months from the closure of the New Fund Offer. Thereafter, the unutilized limit, if any, shall not be available to the Scheme for investment in overseas securities and shall be available towards the unutilized industry wide limits. Further, after 6 months of closure of New fund offer shall the norms of ongoing scheme as specified in the SEBI circulars shall be followed. The above limits will be subject to changes, if any, specified by SEBI from time to time.

Limits post completion of a period of six months from the date of closure of NFO (ongoing): An investment headroom of 20% of the average AUM in overseas securities / overseas ETFs of the previous three calendar months would be available to the Mutual Fund for that month to invest in overseas securities / overseas ETFs subject to maximum limits specified in SEBI circulars.

### **Trading in Derivatives**

The scheme may take exposure to derivative instruments upto 100% of net assets. And, the scheme may use 100% of net assets exposure for hedging purpose and shall not exceed 50% of net assets for other than hedging purpose. Further, Investment in derivatives instruments may also use in the manner permitted by Regulations / guidelines issued by SEBI from time to time.

### **Securitized debt**

Debt securities may include securitized debts up to 10% of the net assets.

### **Investment Strategy of the Scheme**

The underlying theme driving the relative allocation will be quant Money Managers Limited (qMML) research's 'quantamental' investment strategies. qMML believes that a quantitative approach to money management would yield optimal results when combined with the value of human judgement as rules or factors can behave differently when the entire market environment changes, such as our predictive analytics tools suggest. Thus, the quantamental approach seeks to find the harmony between objectivity and subjectivity.

In order to provide the best possible returns and capital preservation, the quantamental approach goes beyond purely factor-based, smart beta or algorithmic strategies. We believe a rules-based mechanical approach needs to be combined with the value of years of human judgement and experience to yield 'adaptive alpha' - the outperformance generated by an ability to adapt investment rules/factors to novel market phases. Thus, we augment traditional quantitative and qualitative methods alongwith 'sentiments data' - a deep knowledge of market structure dynamics, micro level stock selection and inflexion point identification between bouts of greed and fear through analysis of the larger, ever-changing macro environment.

Quantamental combines the innate human ability to adapt, adding to the alpha generated by discipline and identification of underlying factors - adaptive alpha, providing the edge needed to manage volatility and utilize periodic market imbalances to the portfolio's advantage.

qMML may, from time to time, review and modify the Scheme's investment strategy if such changes are considered to be in the best interests of the unitholders and if market conditions warrant it. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The fund will invest in stocks from a universe of NIFTY 500 TRI selected on the basis of a Quant Model. Quantitative methods will be used for (i) screening mechanism to choose best picks and make the stock selection universe smaller, (ii) Deciding on the portfolio weightage for better return as the investment will focus on company's size and liquidity.

The quantitative model which will be used for stock selection will be based on two broad parameters viz., Stock Price movement & Financial/ valuation aspects. The model will use aspects like:

- Stock Price related parameters – This would include stock specific aspects like relative strength, liquidity and volatility, Historic Performance (based on quarterly and annual relative and absolute price movement).
- Financial/ Valuation parameters – This would include aspects based on a company's Balance sheet, cash flow statement & profit & loss account. The parameters are Sales growth (Historical), Earning before Interest and tax (EBIT) & Free Cash flows. (Historical), Dividend yield, Price to book ratio (PB), Return ratios, etc.

The portfolio is reviewed on a quarterly basis and changes are made based on the data generated by the model and on the discretion of the fund manager. The change in the portfolio involves both sale and purchase, both partial and complete, of the existing stocks and purchase of new stocks, if any.

### **Portfolio Construction:**

The portfolio shall be structured so as to keep risk at acceptable levels. This shall be done through various measures including:

1. Broad diversification of portfolio.
2. Ongoing review of relevant market, industry, sector and economic parameters.
3. Investing in companies which have been researched.
4. Investments in debentures and bonds will usually be in instruments which have been assigned investment grade ratings by any approved rating agency.

The AMC may, from time to time, review and modify the Scheme's investment strategy if such changes are considered to be in the best interests of the unitholders and if market conditions warrant it. Investments in

securities and instruments not specifically mentioned earlier may also be made, provided they are permitted by SEBI/RBI and approved by the Trustee. However, such investments shall be made keeping in view the Fundamental Attributes of the Scheme.

### **Risk Profile of the Scheme**

Mutual Fund investments are subject to market risks. Please read the SID carefully for details on risk factors before investment. Scheme specific risk factors are summarized below:

#### **Risk factors associated with investing in equities and equity related instruments**

1. Equity shares and equity related instruments are volatile and prone to price fluctuations on a daily basis. Investments in equity shares and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risks.
2. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges. Investment in such securities may lead to increase in the scheme portfolio risk.

#### **Risk factors associated with investing in debt and money market instruments**

##### **Credit Risk**

Debt instruments carry a Credit Risk, which essentially implies a failure on the part of the issuer of the security to honour its principal or interest repayment obligations. This inability of a credit issuer to honour its obligation is generally a function of underlying performance of the asset, in terms of generating the requisite cashflows. Credit risks of debt securities are rated by independent rating agencies. These ratings range from 'AAA' (read as 'Triple A' denoting 'Highest Safety') to 'D' (denoting 'Default'), with intermediate ratings between the two extremes. Deteriorating credit profile of an issuer may lead to a rating agency lowering the rating on its debt instruments; this is likely to lead to a fall in the price of these instruments.

##### **Liquidity Risk**

Liquidity risk for debt instruments refers to the possibility that there might not be a ready buyer for the debt instrument at a time when the scheme decides to sell it. Liquidity risk is generally a function of the issuer (government securities are generally more liquid than corporate bonds), ratings (higher rated instruments are generally more liquid), and tenure (near tenure instruments are generally more liquid).

##### **Interest-Rate Risk**

In case of fixed income bearing debt instruments, when interest rates rise, prices of the securities decline and

when interest rates fall, the prices increase. The extent of sensitivity of a security to movement in interest rates is determined by its duration, which is a function of the existing coupon, the payment-frequency of such coupon, and days to maturity. Floating rate securities, with coupon linked to market interest rates have less sensitivity to interest rate risk.

##### **Re-investment Risk**

Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.

##### **Prepayment Risk**

Certain fixed income instruments come with a 'call option' which give the issuer the right to redeem the security through prepayment before the maturity date. This option is generally exercised in periods of declining interest rates, and will result in the scheme having to reinvest the proceeds of prepayment at lower yields, resulting in lower interest income.

##### **Basis Risk**

The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

##### **Spread Risk**

In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

##### **Liquidity Risk**

The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Schemes' investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

##### **Settlement Risk**

Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

**Risk associated with Securitized Debt**

The Scheme may invest in domestic securitized debt such as Asset Backed Securities (ABS) or Mortgage Backed Securities (MBS). ABS are securitized debts where the underlying assets are receivables arising from various loans including automobile loans, personal loans, loans against consumer durables, etc. MBS are securitized debts where the underlying assets are receivables arising from loans backed by mortgage of residential / commercial properties.

At present in Indian market, following types of loans are securitized:

1. Auto Loans (cars / commercial vehicles /two wheelers)
2. Residential Mortgages or Housing Loans
3. Consumer Durable Loans
4. Personal Loans
5. Corporate Loans

In terms of specific risks attached to securitization, each asset class would have different underlying risks. Residential Mortgages generally have lower default rates than other asset classes, but repossession becomes difficult. On the other hand, repossession and subsequent recovery of commercial vehicles and other auto assets is fairly easier and better compared to mortgages. Asset classes like personal loans, credit card receivables are unsecured and in an economic downturn may witness higher default. A corporate loan/receivable, depend upon the nature of the underlying security for the loan or the nature of the receivable and the risks correspondingly fluctuate.

**Risk Mitigation**

Risk & Description specific to Equities	Risk Mitigants / Management Strategy
Quality risk Risk of investing in unsustainable / weak companies.	Investment universe carefully selected to only include high quality businesses.
Price risk Risk of overpaying for a company.	“Fair value” based investment approach supported by comprehensive research.
Risk of fluctuations in the value of the investment portfolio	The Scheme may use techniques and instruments such as futures and options etc. to hedge the risk of fluctuations in the value of the investment portfolio. The scheme may enter into derivatives transactions in a recognised stock

	exchange for the purpose of hedging and portfolio balancing in accordance with the guidelines and circulars issued by SEBI from time to time.
Concentration risk	In order to diversify individual company risk, the fund will on an average and under normal circumstances invest across companies across various sectors. The quantum of exposure shall be decided on the basis of relative earnings, growth, valuations and potential valuations. As the fund intends to hold less number of stocks than a diversified growth fund, the NAV volatility (risk)
Credit Risk	This risk shall be mitigated by investing in papers which have a high degree of safety. Further this risk is minimal in case of securities issued by central / state government/.
Liquidity Risk	This risk shall be mitigated by striving to avoid investing in thinly traded securities or securities with lower volumes.
Interest-Rate Risk	This risk can be mitigated by the fund manager striving to maintain portfolio duration which is appropriate for market conditions.
Prepayment Risk	This risk can be mitigated by minimizing investments in securities with ‘call options’, unless favourable market conditions makes investments in such securities attractive.
